

### 7.3 Absolute Value Equations

To solve absolute value equations:

1. Isolate the absolute value expression
2. Create two equations.
  - i) The expression inside the absolute value function is positive.
  - ii) The expression inside the absolute value function is negative.
3. Solve each equation and check for extraneous roots.

$$x^2 = 9$$

$$(x+2)^2 = 9$$

$$x+2 = \pm 3$$

$$|x| = 5$$

$$x = 5 \text{ or } x = -5$$

$$2|x| - 3 = 7$$

$$2|x| = 10$$

$$|x| = 5$$

$$\swarrow \searrow$$

Ex. 1 Solve and show how each solution can be found graphically.

a)  $|x - 5| = 9$  The dist. between a # and 5 is 9.

$$x - 5 = 9 \rightarrow x = 14$$

$$x - 5 = -9 \rightarrow x = -4$$

$$y_1 = |x - 5|$$

$$y_2 = 9$$

check:  $|14 - 5| = 9$   
 $|9| = 9$   
 ✓

check:  $|-4 - 5| = 9$   
 $|-9| = 9$   
 ✓

b)  $|x + 5| = 4x - 1$

$$x + 5 = 4x - 1 \rightarrow 6 = 3x \rightarrow x = 2$$

$$x + 5 = -(4x - 1) \rightarrow x + 5 = -4x + 1 \rightarrow 5x = -4 \rightarrow x = -0.8$$

$$y = |x + 5|$$

$$y = |x + 5|$$

$$y = 4x - 1$$

check:  $|2 + 5| = 4(2) - 1$   
 $|7| = 7$   
 ✓

check:  $|-0.8 + 5| = 4(-0.8) - 1$   
 $|4.2| = -4.2$

NO, can't be neg

c)  $|4x - 7| = -2x - 1$

$$4x - 7 = -2x - 1 \rightarrow 6x = 6 \rightarrow x = 1$$

$$4x - 7 = -(-2x - 1) \rightarrow 4x - 7 = 2x + 1 \rightarrow 2x = 8 \rightarrow x = 4$$

$$y = |4x - 7|$$

$$y = -2x - 1$$

check: 1

check: 1

$$|4(1)-7| = -2(1)-1$$

$$|-3| = -3 \quad \text{NO}$$

check +4

$$|4(4)-7| = -2(4)-1$$

$$|9| = -9 \quad \text{NO}$$

Ex. 2 Solve

a)  $\frac{5|2x+3|}{5} = \frac{30}{5}$

$$|2x+3| = 6$$

$$2x+3 = 6$$

$$2x = 3$$

$$x = 1.5$$

$$2x+3 = -6$$

$$2x = -9$$

$$x = -4.5$$

$$x = 1.5 \text{ or } -4.5$$

check:

$$5|2(1.5)+3| = 30$$

$$5(6) = 30 \quad \checkmark$$

check:

$$5|2(-4.5)+3| = 30$$

$$5(6) = 30 \quad \checkmark$$

b)  $|x-10| = x^2 - 10x$

$$x-10 = x^2 - 10x$$

$$0 = x^2 - 11x + 10$$

$$0 = (x-10)(x-1)$$

$$x = 10 \text{ or } 1$$

$$x-10 = -(x^2 - 10x)$$

$$x-10 = -x^2 + 10x$$

$$x^2 - 9x - 10 = 0$$

$$(x-10)(x+1) = 0$$

$$x = 10 \text{ or } -1$$

$$x = 10 \text{ or } -1$$

check 10:

$$|10-10| = 100-100$$

$$0 = 0 \quad \checkmark$$

check 1:

$$|1-10| = 1-10$$

$$|-9| = -9 \quad \text{NO}$$

check -1:

$$|-1-10| = |-1+10|$$

$$|-11| = 11 \quad \checkmark$$

Ex. 3 A program controls the amount of chips packaged into a bag. If the ideal mass is 143 grams with an error of 4 grams. Between what masses can the bag of chips be? Determine the absolute value equation.

$$143 + 4 = 147g$$

$$143 - 4 = 139g$$

$$|M - 143| = 4$$

↑  
dist from the mean

Reminder:

When asked to solve by graphing.... 1 Graph the left side  $v_1 = 12x - 31$

$$|2x-3|=5$$

1. Graph the left side  $y_1 = |2x-3|$
2. Graph the right side  $y_2 = 5$
3. Find the points of intersection.  
The values of  $x$  that balance the equation.  
(where  $y_1 = y_2$ )

$$y_1 = |2x-3|$$
$$y_2 = 5$$

don't need to graph.
